

METAGENESIS: Acentric Philosophy

Mystical METAGENESIS — the Conscious Basis of Hope.

From Big Bang beginnings, iterations of communication continue and endure in all subsequent understanding. Repeat communication carries through in rebirth and newness. Ontogeny recapitulates phylogeny — *the prologue recaps the epilogue.*

Ultimately, the way of quantum-electric convergence, the strong attraction force of opposites, wins the day by gravity sharing of positive-negative charges. Even as chaos endures persistently in the cosmic dynamic, divergence, convergence and emergence work their way through it. The centricity of like charges is anti shared-gravity, consequential to chaos, to divergence; exclusive male culture is centrist fixation in divergence.

With trustful communication come transformation and cumulative intelligence. The process of consciousness-birthing is a process of soul maturing in the course of a lifetime. The maturing of human soul transcends substance transformation inter-generationally; our ancestors are “in us” even as we will be in future generations. Humankind becomes more self-reflective in each generation. Self-reflection experiences the truth in its own share of cosmic/ natural acentricity.
